PROFILE SUMMARY

I am **Hiren Vaghela**, a **Data Scientist and Data Analyst** from Ahmedabad, Gujarat. I transform raw data into actionable business insights through **SQL, Python, Power BI, Machine Learning, and Data Visualization.** I enjoy solving real-world business problems through data-driven decision making, transforming complex datasets into clear insights, interactive dashboards, and predictive models. I have built 20+ projects spanning retail analytics, crime analytics, computer vision, sales intelligence, and customer behavior analysis. Currently **pursuing M.Sc. Information Technology from Gujarat University** while continuously building industry-focused Data Analytics and ML projects.

KEY SKILLS

- **Programming & Querying:** Python, SQL
- **Data Analytics:** Data Cleaning , Data Summarization
- **Visualization Tools:** Power BI,Microsoft Excel
- **Libraries & Tools:** Pandas, NumPy, Jupyter Notebook , Vs code
- **Other Skills:** Critical thinking, Problem Solving

PROFESSIONAL EXPERIENCE

Infolabz PVT LTD – *Ahmedabad, Gujarat*
Web Developer Intern | *May 2024*

- Developed and maintained responsive web applications using **HTML, CSS, JavaScript, Python, and Django.**
- Collaborated with teams to design user-friendly layouts, enhancing site performance.
- Optimized user experience through meticulous testing and strategic improvements.

EDUCATION

2019-2020	**10th S.S.C | 77.33%**	**Sheth Nanubhai Vidhya mandir**
2021-2022	**12th H.S.C | 88.86%**	**Sheth Nanubhai Vidhya mandir**
2022-2025	**BSC.IT (CA & IT)**	**K.S. School of Business Management**
	4.21 GPA (Out of 5 GPA)	**and Information Technology**

SOFT SKILLS & HOBBIES

- Critical Thinking and Problem Solving
- Time Management and Communication and Collaboration
- **Hobbies:** Playing Cricket

PROJECT

- **UIDAI Data Hackathon 2026 – Aadhaar Enrolment & Biometric Analytics (SQL) :** GitHub
    - Built in a 5-member team for UIDAI Data Hackathon 2026; processed 1.8M+ records of 69.7M Aadhaar enrolments using SQL.
    - Used CTEs, Window Functions, LAG(), and string functions for cleaning and time-series analysis.
    - Generated insights on demographics, geography, and monthly enrolment trends.
- **Retail Sales & Customer Behavior Analysis (SQL) :** GitHub
    - Analyzed retail sales data using MySQL star schema to study customer purchasing behavior.
    - Used advanced SQL concepts such as CTEs, Window Functions, GROUP BY, and JOINs.
    - Identified high-value customers, top-selling products, and store-wise revenue trends.
- **E-Commerce-Customer-Behavior-Analytics (Python) :** GitHub
    - Built an E-Commerce Customer Behavior Analytics project using Python on 20,000 customer records.
    - Analyzed customer behavior, revenue trends, loyalty, and cart abandonment using Pandas and visualization tools.
    - Generated key business insights to improve sales, retention, and marketing performance.
- **Crime Data Analysis Dashboard (Power BI) :** GitHub
    - Analyzed crime data to identify trends, hotspots, and high-risk areas across regions.
    - Developed interactive **Power BI dashboards** with KPIs, filters, and time-based analysis.
    - Delivered insights on crime patterns and regional comparisons for data-driven decision-making.
- **Uber Data Analysis (Power BI) :** GitHub
    - Analyzed ride-hailing data to identify booking patterns, peak hours, and customer behavior trends.
    - Built interactive **Power BI dashboards** using Power Query, DAX, and slicers for dynamic analysis.
    - Generated insights on demand trends, high-performing locations, and pricing optimization.

- **Swiggy Sales Performance Dashboard (Excel) :** GitHub
    - Built an interactive sales dashboard to analyze Swiggy order and revenue data.
    - Performed data cleaning and KPI creation for sales and customer trends.
    - Analyzed city-wise performance, peak ordering times, and top food categories.

- **Blinkit Grocery Sales Data Dashboard (Excel) :** GitHub
    - Designed a dynamic Excel dashboard using Pivot Tables, Charts, and Slicers.
    - Analyzed outlet performance, product categories, and sales trends.
    - Delivered actionable insights through automated visual reporting.

- **Helmet Detection:** GitHub
    - Developed a **Helmet Detection System** using **YOLO** to identify riders **with and without helmets** from images and live video streams.
    - Prepared and cleaned a **custom dataset**, including labeling and preprocessing.
    - Trained the model on **Google Colab with GPU acceleration** to improve training efficiency.
    - Enhanced model performance using **data augmentation** and **hyperparameter tuning**.
    - Implemented **real-time detection** using **OpenCV** with live camera input.
    - Achieved approximately **78% detection accuracy**.
